

WHAT DO CUSTOMERS SAY ABOUT PORTACOUNT® RESPIRATOR FIT TESTERS?

Professionals in Occupational Health & Safety, Industrial Hygiene, Emergency Response, and Healthcare have relied on TSI's PortaCount® respirator fit testing products since 1987. We support worker safety initiatives and programs with the most accurate quantitative respirator fit testing systems available.

We reached out to our customers and asked them how the PortaCount® Respirator Fit Tester makes their workers safer and programs more efficient. Below is their feedback:

"With quantitative testing, fit tested staff were more confident when using the selected respirators and feel at ease while doing treatment to infectious patients."

MS. KAYO NAKASHIMA
MS. MAYUKO ARAI

INFECTIOUS CONTROL NURSES
NISHI KOBE MEDICAL CENTER, JAPAN

Nishi Kobe Medical Center was the very first hospital in Japan who accepted patients during the H1N1 pandemic in 2009. Through the experience, they realized the importance of infection prevention control.

Qualitative vs. Quantitative Fit Testing

"In 2014, TSI's PortaCount® Respirator Fit Tester was introduced to the hospital, they have tested more than 3,000 staff with an average of 500 staff annually. They prefer Quantitative Fit Testing over Qualitative Fit Testing as they could verify the results through physical numbers and not a subjective method."

Achieve a Confident Respirator Fit

"The PortaCount® Respirator Fit Tester accurately fit tested three approved mask types for use in the hospital for their staff. With quantitative testing, fit tested staff were more confident when using the selected respirators and feel at ease while doing treatment to infectious patients."

Maximizing Protection through Laughter

"The real time Fit Check™ Mode made the staff realize that aggressive laughter causes a leak in the face seal. They were able to learn from the real time Fit Check Mode how to control the movement of the mouth without breaking the seal of the mask, thus maximizing the protection of their mask."
