FIT TESTING N95s CHOOSE THE RIGHT INSTRUMENT

WHAT'S THE DIFFERENCE? N95s vs. FULL AND HALF-FACE RESPIRATORS

Full-face/Half-face

- + Plastic body, high-rated cartridge filter, Elastomeric sealing surfaces
- + Particle Leakage occurs primarily at sealing surface

N95

- + Disposable masks with non-elastomeric sealing surfaces
- + Particle Leakage is at sealing surface and via filter media penetration

SIDE-BY-SIDE COMPARISON FIT TESTING N95s ON TWO INSTRUMENTS

Among a sample of 10 of the most widely used N95s, a high proportion of good fitting N95s failed unnecessarily on instruments without DMA (Differential Mobility Analyzer) technology.

DMA technology ("N95-Companion") disregards particles that penetrate N95 filters, counting only those present due to seal leakage. This method yields the most accurate N95 fit test results.

Good Fits PASS on 8048 but FAIL on 8040

+ Average cost and quality N95s+ Most frequently used

N95s in the market

Good Fits
 PASS on BOTH
 8048 and 8040
 + Expensive, high

quality N95s

Poor Fits FAIL on BOTH 8048 and 8040

+ Low cost and quality N95s

WITHOUT THE DMA, GOOD FITTING N95s FAIL FIT TESTS ON THE 8040

+ The 8048 comes standard with the DMA

- + The **8040** is only suited for fit testing **full- and**
- half-face respirators (which do not require the DMA)
- + 8040s are upgradeable to include DMA

FIT TESTING N95s CHOOSE THE **RIGHT INSTRUMENT**

VHICH INSTRUM

Type of Mask	Model Suggested	How a PortaCount® can benefit your N95 Fit Test Program
Use only N95s	8048	 + Eliminate high fit test failure rates on N95s + Save money in sourcing multiple makes/models N95s + Save time and money on unnecessary repeats of N95 fit tests + Eliminate uncertainty in safety provided to employees + Fit test any respirator - full/half-face masks to N95s
Use both N95s along with full- and half-face respirators		
Use only full- and half-face respirators	8040	+ If needed, upgrade to the 8048 for only the cost of an upgrade
